

I CLAIM:

1. A multi-functional board eraser structure improvement comprising:
a body which is in a long bar shape, and the top of it has a shallow
trough installed, the two sides have symmetrical set troughs installed,
5 and lower parts installed inside the set troughs;
a wiping cloth embedded in the shallow trough of the body, and a
magnetic element is wrapped inside the wiping cloth;
by access to the assembling of the preceding components, different
colors of white board markers can be embedded in the set troughs, and
10 the front part of the white board marker can be pushed down so the
rear part will rise up to be taken out when in use, and the wiping cloth
not only serves as a wipe out but also attaches to the white board to
prevent the board eraser and the white board markers from falling or
missing.
- 15 2. A multi-functional board eraser structure improvement as claimed in
claim 1, wherein long clipping points are installed on the front and
rear of the inner surface of the set troughs for the embedding and
securing of white board markers.
